

Power-as-a-Service

A functional solution for your electrical and charging infrastructure, enabling a smooth transition to electrification of road transport

At Vattenfall Network Solutions we enable fossil free living by providing customized solutions **for electrification of the road transport sector.**

We can support your business by:

- Delivering the function of electrical infrastructure as a service, freeing up resources for your business
- Upgrading your networks and avoiding costly downtime from electrical outages
- Handling all compliance, regulatory and environmental issues and reducing risk

Enabling electrification for a fossil-free living

At Vattenfall Network Solutions we deliver the function of high voltage electrical network and charging infrastructure. We take full responsibility for your charging needs by owning your networks and managing all compliance, regulatory and environmental issues, so you can concentrate on your core business.

Vattenfall can provide Power-as-a-service for electrical and charging infrastructure for trucks, buses and other vehicles, as well as the provision of e-roads and electric drive-trains on board vehicles. We can also help you reduce power peaks and ensure available power when needed using our mobile energy storages.

Our offer, Power-as-a-Service

Power-as-a-Service is a functional solution for which we will be fully responsible for the electrical infrastructure including ownership, electrical safety, maintenance, reinvestments and faults. We deliver the function and take the risks. The customer pays a fixed monthly fee for a period of approximately 10 years for this service.

We take on

Ownership

Regulations

Risk & Responsibility

Planning & Installation

Maintenance

We enable your transition towards fossil-free living
